

Mealy Machine

- 1) Output depends on present state and present input
- 2) Input string of length 'n' \rightarrow output length is also 'n'
- 3) $\lambda: Q \times \Sigma \rightarrow \Delta$

Mealy output is asynchronous

Moore Machine

- 1) Output only depends on present state and on input.
- 2) Input string length 'n' \rightarrow output string 'n+1'
- 3) $\lambda: Q \rightarrow \Delta$

- 4) Output is synchronous with clock
